

TLC Tips for Faculty

wePresent and MirrorOp Presentation Tools

The classroom you are in is home to wePresent hardware and MirrorOp software. wePresent is a wireless presentation system that allows users to share content from any device to present, interact and collaborate. These tools are needed in order to broadcast from a device to the mounted screen.

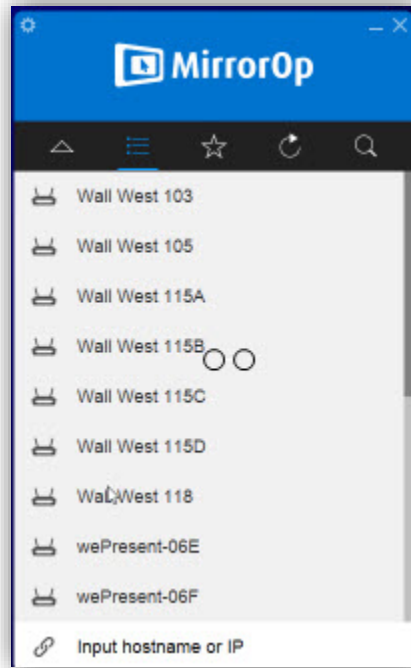

1. Turn on the PC and wall mounted display and locate the MirrorOp icon on the desktop display.
2. Launch the software by double clicking the icon

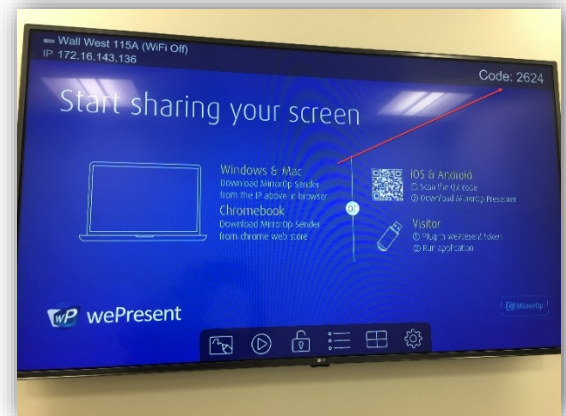

3. Select Yes in the window displayed.
4. A list of available wePresent systems will be shown in a navigation window near the middle of the screen.

5. Choose your room then click on the Connect button. Be sure to select the correct room; otherwise, you could be broadcasting to another wePresent system.

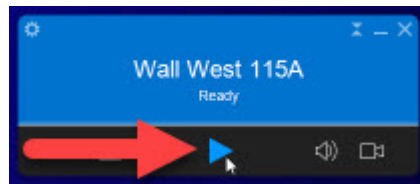

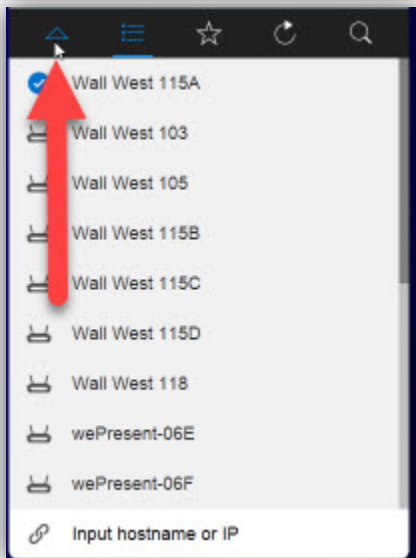

6. The screen will display the four digit access code that will be used as a one-time login.

7. On your computer screen a window will appear where you will enter the four digit access code.

8. Click on the blue triangle on the top of the screen to minimize the list of systems.

9. When you are ready to broadcast the PC, click on the solid blue triangle in the middle of the screen. Your machine will now be broadcasting to the system that you selected.

10. The MirrorOp software will launch a black control window, which may need to be minimized. To minimize this window, click on the vertical triangles that are located in the bottom right corner of the control window.

11. This will reveal another blue window, which will minimize the control window to the taskbar below.
12. To re-launch the MirrorOp software click on the MirrorOp icon on the bottom of the taskbar or icon tray.
